

# 8 PILLARS OF WASTE

## in BIM & VDC:

### DEFECTS

Rework from bad data, clashes, or uncoordinated models.

### WAITING

Delays from slow approvals, trade feedback, or bottlenecks.

### MOTION

Wasted clicks, manual data entry, inefficient workflows.

### INVENTORY

Hoarding outdated models, unused families, or excessive WIP.

### EXTRA PROCESSING

Over-modeling, redundant meetings, unnecessary complexity.

### NON-UTILIZED TALENT

Underusing skilled team members or ignoring field input.

### OVERPRODUCTION

Modeling unnecessary details or overcomplicating families.

### TRANSPORTATION

Too many file transfers, platform hopping, or unnecessary steps.

We build BIM processes that actually work. Lean, streamlined, and tailored to your trade. No fluff, no guesswork, just a system that delivers real results.

**Let's fix your process before it breaks your project.**
